

Market Summaries

People's Republic of China

Yield Movements

In the second quarter (Q2) of 2017, the yield curve of the People's Republic of China (PRC) experienced unusual movements. Between 1 June and 15 August, the PRC's yield curve rose at the longer-end and declined at the shorter-end (**Figure 1**). Yields rose between 5 basis points (bps) and 10 bps for tenors of 9 years or longer. In contrast, yields for tenors of 3 years or less fell between 11–16 bps during the review period, while tenors between 4 years and 7 years fell 3–7 bps.

The yield movements during the review period reflect a correction of the inverted yield curve that occurred in May. On 24 May, the 5-year yield had risen to 3.75%, while the 7-year, 8-year, and 9-year tenors had fallen to 3.74%, 3.73%, and 3.74%, respectively. Tenors of less than 5 years experienced a rapid rise in yields in May.

The yield curve's inversion reflected the tightening liquidity situation in the PRC driven by deleveraging. In Q1 2017, the PRC raised rates on its open market operations to reduce demand for credit. The tight liquidity situation particularly affected shorter-term yields as borrowing costs were pushed up.

Concerns that the PRC's economy would slow down, partly as a result of deleveraging, also caused some yields to decline at the longer-end of the curve during the period. However, concerns regarding the health of the domestic economy abated when the PRC reported real gross domestic product growth of 6.9% year-on-year (y-o-y) in Q2 2017, the same pace as in Q1 2017.

Industrial production growth in the first half of 2017 was better than the same period in 2016. While industrial production growth fell to 6.4% y-o-y in July from 7.6% y-o-y in June, growth rates were still better compared with year ago levels.

The improved growth prospects helped restore market confidence in the PRC's economy, causing interest rates to rise at the longer-end of the curve. Furthermore,

Figure 1: The People's Republic of China's Benchmark Yield Curve—Local Currency Government Bonds

Source: Based on data from Bloomberg LP.

the People's Bank of China (PBOC) helped ease the liquidity situation by injecting a net CNY220 billion into the financial system on 23 July through open market operations. Market participants, however, believe this does not change the PBOC's stance toward deleveraging. Rather, it is viewed as part of efforts to manage financial conditions to prevent a cash crunch as the PBOC continues guarding against credit risk. The easing of financial conditions helped pushed down rates at the shorter-end and increase them at the longer-end of the curve as expectations of better growth led to the yield curve shift seen between 1 June and 15 August.

Inflation eased slightly to 1.4% y-o-y in July from 1.5% y-o-y in June.

Size and Composition

LCY bonds outstanding expanded 4.1% quarter-on-quarter (q-o-q) and 12.9% y-o-y in Q2 2017 to reach CNY51.9 trillion at the end of June. The pace of growth quickened from Q1 2017's 0.8% q-o-q (**Table 1**).

Government bonds. Growth in the PRC's bond market was driven by increases in the government bond

segment. Government bonds outstanding increased 5.8% q-o-q in Q2 2017, up from 1.6% q-o-q growth in the previous quarter, mainly led by local government bonds outstanding, which grew 13.0% q-o-q in Q2 2017 versus 3.6% q-o-q in Q1 2017.

Despite ongoing deleveraging in the PRC, local governments continued to issue bonds to refinance debt and obtain additional funding. In addition, the central government increased the local government bond quota limit for 2017 to CNY18.8 trillion. However, the pace of growth in Q2 2017 was down on a y-o-y basis, rising 50.0% y-o-y versus 93.2% y-o-y in Q2 2016.

There were no central bank bonds outstanding in Q2 2017 as the PBOC no longer issues such bonds.

Corporate bonds. Corporate bonds outstanding continued to decline in Q2 2017, albeit at a slower pace, falling 0.1% q-o-q in Q2 2017 to CNY14.8 trillion, following a 1.2% q-o-q decline in Q1 2017, as the ongoing deleveraging in the PRC led to reduced corporate demand for funding. The biggest decline came from commercial paper, which fell 13.3% q-o-q as rising rates, particularly for shorter-dated tenors, made companies reluctant to issue funds with short maturities (Table 2). State-owned enterprise bonds also fell in Q2 2017, declining 4.3% q-o-q, followed by medium-term notes, which dropped 0.8% q-o-q.

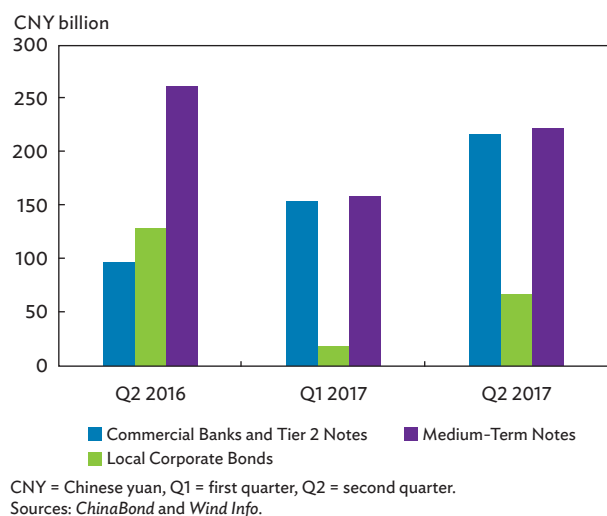

Issuance has recovered somewhat in 2017, rising 23.0% q-o-q in Q2 2017 due to the refinancing of maturing corporate bonds; outstanding corporate bonds

Table 2: Corporate Bonds Outstanding in Key Categories

	Amount (CNY billion)			Growth Rate (%)			
	Q2 2016	Q1 2017	Q2 2017	Q2 2016		Q2 2017

Figure 2: Corporate Bond Issuance in Key Sectors

fell only 0.1% q-o-q. However, on a y-o-y basis corporate bond issuances fell 18.4% in Q2 2017. The q-o-q rise in issuance was mostly in the form of medium-term notes and issuances by financial institutions (**Figure 2**).

The PRC's corporate bond market is dominated by a few big issuers (**Table 3**). At the end of June, the top 30 corporate bond issuers accounted for CNY5.9 trillion worth of corporate bonds outstanding, or about 40.3% of the total market. Of the top 30, the 10 largest issuers accounted for CNY3.8 trillion.

The top 30 issuer includes 14 banks, which continue to dominate the list as they generate funding in order to beef up their capital bases and liquidity, and lengthen their maturity profiles.

Table 4 lists the largest corporate bond issuances in Q2 2017. All of the companies on the list are financial institutions, except for one firm engaged in asset management.

Investor Profile

Treasury bonds and policy bank bonds. The share of Treasury bonds, including policy bank bonds, held by

banks declined to 67.3% of the total at the end of June from 69.9% in June 2016 (**Figure 3**). Fund institutions' share rose to 14.8% from 12.3% during the review period.

Corporate bonds. Funds institutions' share of total corporate bonds outstanding rose to 47.5% at the end of June from 41.8% a year earlier due to increased demand for yield (**Figure 4**). In addition, the share of banks' holdings of corporate bonds fell to 15.9% from 19.5% during the review period.

Figure 5 presents investor profiles across different corporate bond categories at the end of June. Funds institutions remain the dominant buyers of both local corporate bonds and medium-term notes, while banks and funds institutions were the dominant holders of commercial bank bonds.

Liquidity

The volume of interest rate swaps rose 6.0% q-o-q due to volatile interest rate movements in Q2 2017. The 7-day repurchase interest rate remained the most used interest rate swap, comprising an 88.6% share of the total interest rate swap volume during the quarter (**Table 5**).

There was an uptick in turnover volume in Q2 2017 for government bonds, owing to the fall in interest rates at the longer-end of the curve (**Figure 6**).

Policy, Institutional, and Regulatory Developments

Rules Issued for Bond Connect

In June, the PRC issued regulations governing foreign investment in the interbank bond market through Bond Connect, a program that links the PRC's and Hong Kong, China's bond markets. Under the Bond Connect regulations, foreign investors can purchase bonds in the PRC's interbank bond market using either renminbi or a foreign currency. Qualified investors include foreign central banks, sovereign wealth funds, international organizations, investors under the Renminbi Qualified Foreign Institutional Investor program, and financial institutions.

Rules Issued to Distinguish between Ordinary and Professional Investors

In July, the PRC issued regulations that require investors in securities to be classified as either professional or ordinary investors based on asset size, earnings, and investment experience. To be classified as professional, investors must have assets of at least CNY5 million or yearly income of at least CNY500,000. They must also have at least 2 years of investment experience. The rule does not prevent ordinary investors from purchasing riskier products, rather they must be informed about the riskiness of the investment if they seek to purchase assets deemed to be above their risk level

Hong Kong, China

Yield Movements

The local currency (LCY) government bond yield curve of Hong Kong, China rose for all tenors between 1 June and 15 August (**Figure 1**). The yield curve also steepened, with longer-dated tenors rising at a much faster pace than yields with tenors of 1 year or less. Yields rose between 18 basis points (bps) and 26 bps for tenors longer than 1 year and between 4 bps and 12 bps for tenors of 1 year or less. As a result, the 2-year versus 10-year yield spread rose 6 bps from 68 bps to 75 bps between 1 June and 15 August.

The rise in Hong Kong, China's government bond yields tracked United States (US) interest rate movements due to the pegging of the Hong Kong dollar to the US dollar. On average, the US yield curve shifted upward by 7 bps from 1 June to 15 August, excluding the yield for the 30-year tenor, which fell 1 bp.

Better economic growth in Hong Kong, China also helped push yields up. Hong Kong, China's gross domestic product (GDP) rose 3.8% year-on-year (y-o-y) in the second quarter (Q2) of 2017 after a 4.3% y-o-y rise in the previous quarter. On a seasonally adjusted and quarter-on-quarter (q-o-q) basis, GDP growth accelerated to 1.0% in Q2 2017 from 0.7% in the first quarter (Q1) of 2017.

Hong Kong, China's GDP growth in Q2 2017 was driven by gains in domestic consumption, investment, and trade. Domestic consumption rose 5.3% y-o-y and investment rose 8.0%. Exports of goods also rose 5.6% y-o-y. Much of the growth in trade was due to demand from Asia, while trade demand from the US showed modest gains.

Hong Kong, China's inflation rate was also relatively stable at 2.0% y-o-y in July compared with 1.9% y-o-y in June.

Size and Composition

The outstanding LCY bonds of Hong Kong, China grew at a slower pace of 0.6% q-o-q in Q2 2017 versus 1.1% q-o-q in Q1 2017 to reach a total of HKD1,862 billion at the end of June (**Table 1**). On a y-o-y basis, LCY bonds rose 6.1%.

Figure 1: Hong Kong, China's Benchmark Yield Curve—Exchange Fund Bills and Notes

Source: Based on data from Bloomberg LP.

The growth in government bonds came mostly from Exchange Fund Bills (EFBs) and Hong Kong Special Administrative Region (HKSAR) bonds. EFBs grew 0.4% q-o-q and 7.4% y-o-y in Q2 2017, while HKSAR bonds grew 7.5% q-o-q and 10.2% y-o-y.

Exchange Fund Notes (EFNs) fell 6.5% q-o-q and 19.5% y-o-y as Hong Kong, China sought to align the EFB and EFN market with the HKSAR bond market by replacing longer-dated EFNs with HKSAR bond issuances. Currently, only 2-year HKSAR bonds are being issued.

The large rise in HKSAR bonds was due to increased issuances under both the Institutional and Retail Issuance Programmes. A total of HKD7.7 billion worth of HKSAR bonds was issued under the Institutional Bond Issuance Programme, including a HKD4.0 billion 3-year bond, a HKD2.5 billion 5-year bond, and a HKD1.2 billion 10-year bond. Under the Retail Bond Issuance, a HKD3.0 billion 3-year bond was issued.

The amount of corporate bonds outstanding rose 0.2% q-o-q and 5.9% y-o-y in Q2 2017. Hong Kong, China's top 30 nonbank issuers had outstanding LCY bonds amounting to HKD141 billion at the end of June, comprising 18.0% of total corporate bonds outstanding. A majority of the top 30 issuers comprised the financing vehicles of large Hong Kong, China companies (**Table 2**).

Table 1: Size and Composition of the Local Currency Bond Market in Hong Kong, China

Sources: Hong Kong Monetary Authority and Bloomberg LP.

The Hong Kong Mortgage Corporation remained the top issuer with outstanding bonds of HKD26.3 billion, followed by Sun Hung Kai Properties (Capital Market) with HKD10.1 billion of bonds outstanding and MTR Corporation (C.I.) with HKD8.9 billion. Among the top 30 nonbank issuers at the end of June, six were state-owned companies and eight were Hong Kong Exchange-listed firms.

Among the top five nonbank issuances in Q2 2017, the majority came from real estate-related entities, with the exception of MTR Corporation and Future Days. The remaining companies on the list are CK Property Finance (MTN), Sun Hung Kai Properties, and Swire Pacific MTN (Table 3).

Policy, Institutional, and Regulatory Developments

Hong Kong, China's Renminbi Quota for Institutional Investors Increased

In July, the Hong Kong Monetary Authority announced that the People's Republic of China's State Council approved an increase in Hong Kong, China's Renminbi Qualified Foreign Institutional Investor quota from CNY270 billion to CNY500 billion.

Indonesia

Yield Movements

Local currency (LCY) government bond yields declined for most tenors in Indonesia between 1 June and 15 August (**Figure 1**). Bond yields fell across the curve—except for the 7-, 9-, and 30-year maturities—by an average of 9 basis points (bps). Yield dropped the most at the very short-end of the curve, shedding 21 bps for the 1-year tenor. Bond yield also declined 19 bps for the 20-year tenor during the review period. The spread between the 2-year and 10-year maturities rose from 41 bps on 1 June to 45 bps on 15 August.

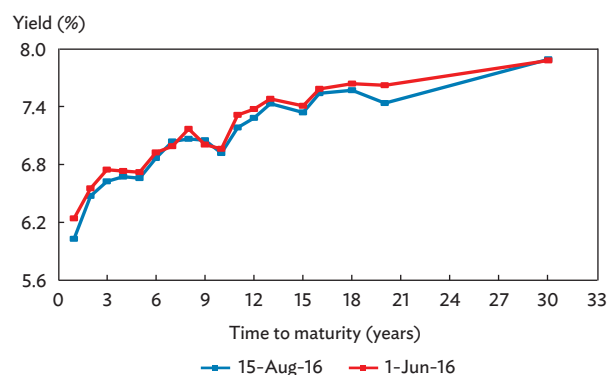

Bonds yields initially fell in June before rising in July amid concerns of a wider budget deficit equivalent to 2.9% of gross domestic product (GDP) in the revised state budget for 2017. Yields fell again after the Ministry of Finance indicated that the budget deficit may only reach the equivalent of 2.7% of GDP.

Overall, renewed investor optimism in Indonesia's bond market drove yields lower during the review period, buoyed by the sovereign rating upgrade from S&P Global in May. As a result, foreign investors continued to increase their holdings of Indonesian government bonds. At the end of June, the foreign holdings' share climbed to 39.5% of the total central government bond stock, where it remained little changed in July at 39.4%.

The uptick in inflation since the start of the year has not deterred nonresident investors from chasing Indonesian government bonds. While overall yields have declined since the start of the year, government bond yields are high relative to other markets in emerging East Asia. Consumer price inflation exceeded 4.0% year-on-year (y-o-y) in each of April, May, and June, before easing to 3.9% y-o-y in July. The uptick in inflation stemmed largely from electricity tariff adjustments and the timing of Muslim religious celebrations, when demand for goods and services normally increases.

The y-o-y inflation remained within Bank Indonesia's target range of 3.0%–5.0% in January–July, allowing the central to hold its policy rate steady in the first 7 months of the year. Subsequently, on 21–22 August, the Board of Governors of Bank Indonesia decided to cut by 25 bps each the 7-day reverse repurchase rate to 4.50%, the

**Figure 1: Indonesia's Benchmark Yield Curve—
Local Currency Government Bonds**

Source: Based on data from Bloomberg LP.

deposit facility rate to 3.75%, and the lending facility rate to 5.25%. In its assessment, Bank Indonesia noted that inflation remained low and the current account deficit was manageable, providing some space for easing its monetary policy. The rate cut is expected to promote credit growth, strengthen financial stability, and boost economic growth.

Real GDP growth reached 5.0% y-o-y in the second quarter (Q2) of 2017, the same pace of growth as in the previous quarter. Domestic consumption remained the largest driver of growth, gaining 5.0% y-o-y. Gross domestic fixed capital formation also supported growth, rising 5.4% y-o-y in Q2 2017. In contrast, government consumption remained weak due to delayed spending, contracting 1.9% y-o-y during the quarter in review. By type of industry, the manufacturing industry was the major contributor to GDP growth in Q2 2017. It was followed by construction, information and communication, and wholesale and retail trade. On a nonseasonally adjusted quarter-on-quarter (q-o-q) basis, Indonesia's GDP growth stood at 4.0%. Bank Indonesia expects the economy to grow between 5.0% and 5.4% in full-year 2017.

Size and Composition

The size of the LCY bond market in Indonesia climbed to IDR2,331.2 trillion (USD175 billion) at the end of June. Growth moderated to 1.8% q-o-q and 16.4% y-o-y

(Table 1), driven largely by central government bonds, which comprise Treasury bills and bonds issued by the Ministry of Finance. Corporate bonds also helped boost growth due to hefty issuance volume during the quarter.

Indonesia's LCY bond market is largely dominated by government bonds, accounting for 85.7% of the aggregate bond stock at the end of June. The remaining share comprised corporate bonds. LCY bonds in Indonesia are mostly conventional in nature, with *sukuk* (Islamic bonds) accounting for only a 13.7% share of the total bond stock at the end of June. However, the overall share of *sukuk* in Q2 2017 reflected an increase of 0.7 percentage points from a 13.0% share in the previous quarter.

Government bonds. At the end of June, total LCY government bonds outstanding stood at IDR1,998.7 trillion, rising 1.5% q-o-q and 15.3% y-o-y. Growth stemmed solely from increases in the stock of central government bonds as the outstanding stock of central bank bills, or Sertifikat Bank Indonesia (SBI), declined during the quarter in review.

Central government bonds. The outstanding amount of central government bonds reached IDR1,952.2 trillion at the end of June. Growth rates slowed in Q2 2017 to 3.2% q-o-q and 18.5% y-o-y from Q1 2017. In Q2 2017, the government tapered its frontloading issuance plan and reduced government securities issuance targets. The government initially planned to issue 64.4% of

government securities (including foreign currency bonds) in the first semester; the share was lowered to 57.4%. The targeted LCY government securities share for the first semester was also reduced from 46.9% to 42.7%. However, government securities issuance in the first semester slightly exceeded the revised targets, with all government securities comprising 57.7% of total issuance in the first half of the year and LCY government securities accounting for 43.1%.

New LCY issuance of central government bonds totaled IDR115.8 trillion in Q2 2017, lower on both a q-o-q and y-o-y basis. The government failed to meet its target amount in six out of 12 scheduled auctions held during the quarter. Most of the partially awarded auctions during Q2 2017 were for Islamic debt securities. However, there was no pressure for the government to raise more funds immediately due to improving revenue collection and the prefunding of its budget requirements through a USD-denominated issuance in December 2016 and the issuance of USD- and JPY-denominated bonds in the first half of the year. Subsequently, in July, the government raised additional funds through a dual-currency issuance of EUR- and USD-denominated sovereign bonds.

Central bank bills. The outstanding amount of central bank bills declined to IDR46.5 trillion at the end of June on contractions of 41.2% q-o-q and 46.0% y-o-y. Beginning this year, Bank Indonesia ceased issuing

conventional SBI and limited its issuance of central bank bills to shariah-compliant SBI, resulting in a significant decline in the outstanding stock of such instruments. Bank Indonesia shifted to using term deposits and foreign exchange bills in lieu of SBI for its monetary operations. In Q2 2017, new issuance of shariah-compliant SBI reached IDR1.1 trillion, resulting in double-digit declines on both a q-o-q and y-o-y basis. One auction was conducted for each month during the quarter, with issuance of 9-month and 1-year shariah-compliant SBIs.

Corporate bonds. Total LCY corporate bonds rose 3.6% q-o-q and 23.1% y-o-y to reach IDR332.6 trillion at the end of June. A total of 109 firms comprised Indonesia's corporate bond market in Q2 2017. Relative to its peers in emerging East Asia, Indonesia's LCY corporate bond market ranks as the third smallest in terms of bonds outstanding. While its government bond market segment is more developed, the corporate bond segment lags behind. Most corporates still prefer to secure bank loans instead of raising capital through the sale of bonds.

Bond issued by financial institutions accounted for the largest share of total corporate bonds at 64.4% at the end of June. The next largest share was for firms from the infrastructure, utilities, and transportation sector, representing 17.2% of the total, and the property and real estate sector at a 6.9% share. All other industry sub-groups had a share of 2.8% or less.

The 30 largest corporate bonds issuers had aggregate outstanding bonds of IDR245.2 trillion at the end of June, or the equivalent of 73.7% of the total market (**Table 2**). The top-30 list comprised mostly financial institutions. Other firms on the list came from capital-intensive industries including telecommunications, property and real estate, and petroleum and natural gas.

The three largest corporate bond issuers have remained the same since the end of December. State-owned lender Indonesia Eximbank retained the top spot at the end of June with outstanding LCY bonds valued at IDR33.7 trillion, accounting for about 10% of the total corporate bond stock. The second spot was held by another state-owned lender, Bank Rakyat Indonesia, with bonds valued at IDR19.0 trillion. Telecommunications firm Indosat was third with outstanding bonds of IDR15.4 trillion. Bank Rakyat

Indonesia and Indosat both issued new bonds during the quarter.

In Q2 2017, total corporate bond issuance reached IDR34.4 trillion, up 53.6% q-o-q and 4.4% y-o-y. There was a notable increase in corporate bond issuance in Q2 2017, with 18 firms tapping the bond market versus 13 in Q1 2017. New corporate bond series totaled 46 issues in Q2 2017, up from 34 bond series in the previous quarter.

The largest new corporate debt issues during the quarter are presented in **Table 3**. Leading the list in Q2 2017 was Bank Mandiri's multitranche issuance in June amounting to IDR6.0 trillion. Bank Mandiri's issuance included a 3-year zero-coupon bond, which marked the first issuance by an Indonesian bank of such a bond. Second on the list of new corporate debt in Q2 2017 was Bank Rakyat Indonesia's multitranche issuance in April valued at IDR5.1 trillion. Federal International Finance raised a total of IDR3.5 trillion from a dual-tranche issue in May, and Semen Indonesia raised IDR3.0 trillion from a single-tranche 3-year bond in June. Telecommunications firm Indosat issued a total of IDR3.0 trillion from the sale of multitranche conventional bonds and *sukuk* in May.

Foreign currency bonds. In June, the government raised JPY100 billion from a triple-tranche bond sale. The sale comprised a JPY40 billion 3-year bond with a coupon rate of 0.65%, a JPY50 billion 5-year bond with a coupon rate of 0.89%, and a JPY10 billion 7-year bond with a coupon rate of 1.04%. The bonds were offered via public offering, representing the first bond sale by Indonesia through this method. The bond sale was well received by investors, including asset management and pension funds, among others.

In July, the government raised EUR1.0 billion with the sale of a 7-year bond priced to yield 2.178% and carrying a coupon rate of 2.15%. The bond was well-received with total orders reaching EUR4.3 billion. Also, the government raised a total of USD2.0 billion from a dual-tranche sale comprising a USD1.0 billion 10-year bond priced to yield 3.9% with a coupon rate of 3.85% and a USD1.0 billion 30-year bond priced to yield 4.8% with a coupon rate of 4.75%. The orderbook totaled USD4.0 billion and USD3.2 billion for the 10-year and 30-year bonds, respectively. The latest issuance was part of the government's funding plan for 2017.

Investor Profiles

Central government bonds. Nonresident investors shored up their holdings of Indonesian LCY government bonds following the rating upgrade from S&P Global. Foreign investors' holdings of LCY bonds climbed to a share of 39.5% at the end of June, up from 38.2% at the end of March and 39.1% from the same period a year earlier (**Figure 2**). While bond yields for all tenors fell an average of 90 bps between 1 January and 15 August, investors remained attracted to Indonesian government bonds, which command the highest yields in emerging East Asia.

At the end of June, foreign holdings of LCY government bonds reached IDR770.6 trillion, up from IDR723.2 trillion at the end of March and IDR644.0 trillion at the end of June 2016. Nonresidents continued to comprise the largest investor group in Indonesia's LCY government bond market in Q2 2017.

While a large share of foreign ownership in Indonesia's bond market poses the risk of destabilizing capital flight, most foreign investors in Indonesian LCY government bonds are considered high-quality, long-term investors. Foreign investors include nonresident banks, fund and asset managers, securities houses, insurance institutions, and pension funds. At the end of June, 36.2% of nonresident holdings were invested in bonds with maturities of over 10 years, and 35.9% were placed in maturities of more than 5 years to 10 years (**Figure 3**).

Figure 2: Local Currency Central Government Bonds Investor Profile

Source: Directorate General of Budget Financing and Risk Management, Ministry of Finance.

Figure 3: Foreign Holdings of Local Currency Central Government Bonds by Maturity

IDR = Indonesian rupiah.

Source: Directorate General of Budget Financing and Risk Management, Ministry of Finance.

Nonresident holdings of government bonds with maturities of 1 year or less accounted for only 5.4% of total foreign holdings.

On the other hand, banking institutions, which account for the largest investor group among domestic investors, continued to see their holdings' share of LCY government bonds decline. At the end of June, banks' holdings of LCY government bonds accounted for an equivalent of 20.4% of the total market, declining from 26.2% at the end of March and 22.0% at the end of June 2016.

Pension funds raised their holdings of LCY government bonds to a share of 4.6% at the end of June. The shares of bond holdings of insurance, mutual funds, and Bank Indonesia were broadly unchanged from June 2016.

Central bank bills. At the end of June, SBI were largely held by banking institutions. Bank holdings of SBI accounted for 79.6% of central bank bills outstanding, a decline from a 90.6% share at the end of March (**Figure 4**). On the other hand, nonbank nonresident investors increased their holdings to a 20.4% share from 9.4% at the end of March.

Ratings Update

On 19 July, Fitch Ratings (Fitch) affirmed Indonesia's long-term foreign currency and LCY issuer default ratings at BBB-. The ratings were given a positive outlook.

Figure 4: Local Currency Central Bank Bills Investor Profile

IDR = Indonesian rupiah.

Notes:

1. In September and December 2015, nonbank nonresidents had no holdings of Sertifikat Bank Indonesia.
2. In March 2016, nonbank nonresidents held IDR0.9 trillion of Sertifikat Bank Indonesia.

Source: Bank Indonesia.

In its assessment, Fitch took note of Indonesia's low government debt burden, favorable growth outlook, and limited sovereign exposure to banking sector risks. Fitch also cited its concern over Indonesia's external exposure and some structural factors that need improvement.

Policy, Institutional, and Regulatory Developments

Bank Indonesia to Allow Non-Dollar Currency Swaps for Hedging

In July, Bank Indonesia announced that it will allow non-dollar currency swaps for hedging transactions. Initially, the central bank will enter into hedging transactions for Japanese yen swaps, which will be followed by swaps denominated in euros and Chinese renminbi. The move by Bank Indonesia is expected to reduce dependence on the US dollar for trade and finance.

Indonesian Parliament Approves Revision to 2017 State Budget

On 27 July, the Indonesian Parliament approved the government's proposed revision to the 2017 state budget. The revised state budget now estimates marginally lower revenue of IDR1,736.1 trillion and higher spending of

IDR2,133.3 trillion. As a result, the budget deficit was projected to reach an equivalent of 2.9% of GDP, up from 2.4% in the original budget. To fund the budget gap, the government will increase its bond issuance in 2017 to IDR467.3 trillion. The underlying macroeconomic assumptions for the revised budget include (i) annual GDP growth of 5.2%, (ii) annual inflation of 4.3%, (iii) an exchange rate of IDR13,400 per USD1, (iv) a 3-month Treasury bill annual rate of 5.2%, and (v) an Indonesian crude oil price of USD48 per barrel.

Bank Indonesia Releases New Regulations for Commercial Paper Issuance

Bank Indonesia released new regulations for the issuance of commercial paper by nonbank corporate entities. The new regulations, which came into effect on 4 September, allow corporates to issue commercial paper with a maturity of 1 year or less, subject to certain requirements. The new rules governing commercial paper issuance require issuing companies to have a healthy financial position for a period of 3 years and an assessment from a rating agency.

Republic of Korea

Yield Movements

Between 1 June and 15 August, local currency (LCY) government bond yields in the Republic of Korea rose for most tenors (**Figure 1**). The increase was most pronounced in the belly of the curve, where medium-term tenors of 2, 3, and 5 years rose 15 basis points (bps) on average. The yield for the 10-year bond also advanced, rising 9 bps, and yields for the 1-year and 20-year tenors rose 4 bps and 2 bps, respectively. Meanwhile, yields for the 3-month, 6-month, and 30-year tenors declined an average of 2 bps. The spread between the 2-year and 10-year yields narrowed to 60 bps on 15 August from 65 bps on 1 June.

The rise in yields, particularly for medium-term tenors, reflected uncertainty over the timing of anticipated monetary tightening policies both domestically and in major developed markets, as well as the implementation of economic and fiscal policies by the new administration in the Republic of Korea.

Yields rose in June after the United States (US) Federal Reserve raised the target range on its key policy rate. Other international factors contributing to the increase in yields during the review period included speculation that the Federal Reserve's balance sheet reduction would commence earlier than expected, the European Central Bank hinting at an eventual tapering of its quantitative monetary easing policy, and increased geopolitical concerns.

On the domestic front, continued economic growth and the release of the new administration's economic policies have put upward pressure on yields, as have increased expectations of a tightening stance by the Bank of Korea and the predicted expansion of the supply of government bonds to fund planned increases in fiscal spending over the next 5 years. In July, the Republic of Korea's Parliament approved a KRW11.2 trillion supplementary budget for 2017; at the same time, the Ministry of Finance stated that no additional bonds would be issued to fund the budget. The market is also monitoring the submission of the 2018 budget proposal in September.

Yield movements for short-term tenors reflected foreign bond investment flows. Foreign investors have been

Figure 1: The Republic of Korea's Benchmark Yield Curve—Local Currency Government Bonds

Source: Based on data from Bloomberg LP.

actively participating in the arbitrage trading of short-term LCY bonds, taking advantage of the continued strengthening of the Korean won. Year-to-date, the domestic currency has appreciated 6.2% against the US dollar. Despite episodes of foreign selling that led to the rise in short-term yields, demand for LCY bonds remained strong overall during the review period, resulting in only small yield movements at the short-end of the curve.

In line with expectations of improved economic growth, the Bank of Korea in July raised its 2017 gross domestic product (GDP) growth forecast to 2.8% from April's projection of 2.6%. The 2018 GDP forecast of 2.9% growth was maintained. According to the Bank of Korea, domestic growth will continue to be supported by investments, as exports are expected to be below the July forecast mainly due to slowdown in service exports. Meanwhile, consumption is expected to continue to recover. Monthly inflation is expected to stay close to the 2.0% y-o-y target level, with full-year 2017 inflation expected to be near the 1.9% projection made in July. Given stable inflation and the continued economic recovery, the Bank of Korea maintained its base rate at 1.25% in its 13 July and 31 August Monetary Policy Board meetings. However, the central bank noted volatility in financial markets brought about by increased geopolitical concerns. Moving forward, the Bank of Korea will continue to monitor the paces of monetary policy normalization and trade conditions with major countries, trend in domestic household debt, and geopolitical developments.

The Republic of Korea's GDP growth eased to 2.7% year-on-year (y-o-y) in the second quarter (Q2) of 2017 from 2.9% y-o-y in the first quarter (Q1) of 2017. The slower growth was driven by a smaller increase in gross fixed capital formation, led by slowing growth in construction investment. Exports also posted no growth in Q2 2017 following a 3.9% y-o-y increase in the previous quarter. On a quarter-on-quarter (q-o-q) basis, the Republic of Korea's economic growth slowed to 0.6% q-o-q in Q2 2017 from 1.1% q-o-q in Q1 2017.

Consumer price inflation in the Republic of Korea remained within the central bank's 2.0% target level in Q2 2017, averaging 1.9% y-o-y. Inflation picked up in July to 2.2% y-o-y due to a rise in food and utilities prices.

Size and Composition

The Republic of Korea's LCY bond market expanded 2.1% q-o-q to KRW2,138 trillion (USD1,869 billion) at the end of June, driven by growth in both the government and corporate sectors (**Table 1**). Corporate bonds accounted for a majority of bonds outstanding, totaling KRW1,246 trillion. Government bonds summed to KRW892 trillion. On a y-o-y basis, the LCY bond market expanded 3.6%.

Government bonds. LCY government bonds outstanding rose 2.3% q-o-q to KRW892 trillion at the end of June. The increase was primarily driven by the 3.6% q-o-q rise in the outstanding stock of central government bonds. Issuance of Korea Treasury Bonds rose in Q2 2017

from the previous quarter in line with the government's continued frontloading policy to prop up the economy. The government has spent 59% of its full-year budget in the first half of 2017. Meanwhile, the outstanding stocks of central bank bonds and other government bonds were almost unchanged from Q1 2017 at KRW175 trillion and KRW165 trillion, respectively.

Government bond issuance in Q2 2017 amounted to KRW89 trillion, which was almost at par with Q1 2017. The increase in issuance of Korea Treasury Bonds was capped by the decline in issuance of other government bonds, particularly Korea Development Bank bonds.

Corporate bonds. LCY corporate bonds outstanding expanded 1.9% q-o-q to KRW1,246 trillion at the end of June. The top 30 LCY corporate bond issuers in the Republic of Korea continued to comprise the majority of total LCY corporate bonds outstanding, with a share of 64.5% and aggregate bonds of KRW804 trillion at the end of June (**Table 2**). Financial companies involved in securities trading, investments, and banking continued to account for a majority of the top 30 largest debt issuers, with total bonds outstanding worth KRW474 trillion. Korea Housing Finance Corporation remained the largest issuer with outstanding bonds valued at KRW116 trillion.

Corporate bond issuance in Q2 2017 was the highest it has been since Q2 2015, surging 17.5% q-o-q to KRW112 trillion as companies took advantage of relatively low interest rates in anticipation of an upward trend in

quarter were from banks, insurance companies, and heavy industries.

Investor Profile

Insurance companies and pension funds remained the largest investor group in the LCY government bond market at the end of March with an aggregate share of 33.2%, up from 31.8% in March 2016 (**Figure 2**). Other financial institutions accounted for the next largest holdings with a share of 19.6%, slightly down from 20.5% a year earlier. The share of general government also fell to 18.9% at the end of March from 19.6% a year earlier. The shares of banks and foreign investors inched up during the review period to 14.7% and 10.8%, respectively.

Insurance companies and pension funds continued to account for the largest share of holdings in the Republic of Korea's LCY corporate bond market at 38.5% at the end of March, up slightly from 38.1% in March 2016 (**Figure 3**). The share of other financial institutions rose to 33.4% from 31.8% during the review period, while the share of foreign investors in the Republic of Korea's LCY corporate bond market remained negligible.

Net foreign investments in the Republic of Korea's local currency bond market remained strong in Q2 2017 (**Figure 4**). Net foreign investments amounted to KRW1,375 billion in April and rose to KRW2,136 billion in May. In June, net foreign investments eased to KRW1,551 billion, partly due to a large foreign institutional

fund selling its short-term holdings as part of its portfolio adjustment.¹⁷ Foreign investors increased their holdings in July with net investments jumping to KRW2,755 billion.

There was a notable drop in volatility in net foreign investments in 2017 compared with 2016, particularly for bonds with tenors of less than 1 year (Figure 5). Foreign demand for bonds with tenors longer than 5 years was also more stable in 2017, with net foreign investments reaching a high of KRW2,394 billion in July.

Ratings Update

In August, S&P Global affirmed its AA long-term and A-1+ short-term sovereign credit ratings for the Republic of Korea. S&P Global also maintained a stable outlook on the long-term rating, citing the Republic of Korea's steady economic growth, favorable policy environment, sound fiscal position, and net external creditor position

¹⁷ Reuters. 2017. *Franklin Templeton Trims Korea Treasury Bonds as Part of Portfolio Adjustment*. 29 June. <http://www.reuters.com/article/us-southkorea-economy-bonds-idUSKBN19K053>

as reasons for its decision. S&P Global noted the recent heightened geopolitical tension with the Democratic People's Republic of Korea, but believes a conflict is unlikely. The rating agency also noted concern over high levels of household debt, while recognizing the government's efforts to address it.

Policy, Institutional, and Regulatory Developments

National Assembly Approves KRW11.2 Trillion Supplementary Budget

In July, the Republic of Korea's National Assembly approved the government's KRW11.2 trillion supplementary budget proposal. The supplementary budget will allocate KRW4.2 trillion to increase hiring in the public sector and provide more regular jobs in small and medium-sized enterprises. Of the total supplementary budget, KRW1.2 trillion will be allotted

to programs that expand employment, particularly among the youth and women who want to return to the workforce; KRW2.3 trillion will be spent on policies to support the working class, including an expansion of the number of basic social security beneficiaries; and KRW3.5 trillion will be used to support local governments, particularly education programs.

Financial Services Commission Announces New Mortgage Rules

In August, the Financial Services Commission announced new measures to curb speculative demand in the Republic of Korea's housing market. Measures include tightening the loan-to-value and debt-to-income ratios to 40% each for home buyers in "bubble-prone areas." For multiple homeowners, mortgage borrowing will also be subject to tighter loan-to-value and debt-to-income ratios; the ratios for both will be trimmed by 10 percentage points.

Malaysia

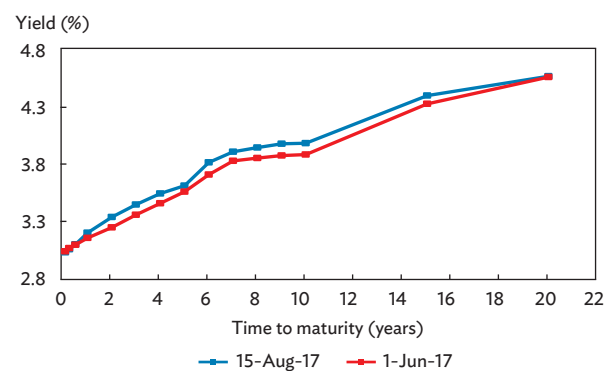

Yield Movements

Between 1 June and 15 August, bond yields for local currency (LCY) government bonds in Malaysia increased for all tenors except the 1-month and 3-month tenors, whose yields fell by 1 basis point (bp) each, and the 6-month tenor, whose yield was practically unchanged (**Figure 1**). Among the tenors that saw yield advances, the biggest was for 6-year government bonds, which posted an 11-bps increase, while 20-year tenors had the smallest increase of 1 bp. In the belly of the curve (2-year to 9-year maturities), bond yields increased by an average of 9 bps, and at the long-end of the curve (10-year to 15-year maturities), yields also increased 9 bps on average. The yield spread between the 2-year and 10-year tenors widened by 1 bp during the review period from 63 bps to 64 bps.

Yield movements in Malaysia's LCY government bond market between 1 June and 15 August were range-bound, with increases mainly reflective of the cautious stance of investors ahead of the United States (US) Federal Reserve's balance sheet reduction program and further interest rate hikes as recent US data suggest economic growth is gaining momentum. In addition, the European Central Bank is considering a policy shift away from its asset purchase program as the eurozone's recovery gains traction. The bond yield increases may also have taken their cue from the upward movement of US Treasury yields. Selling pressures due to profit-taking could have also lifted yields, but the market's anchor on onshore support tempered additional surges. On the domestic front, controversies surrounding the unresolved issues of state-owned 1Malaysia Development Berhad and the political and economic challenges of the upcoming general election also contributed to the increase in yields.

Bank Negara Malaysia (BNM) kept its overnight policy rate unchanged at 3.00% during its monetary policy meeting on 13 July. Inflation is expected to further moderate in the second half of 2017 as an effect of waning global cost factors. Current macroeconomic developments also supported the policy decision. The Malaysian economy expanded faster than expected in the second quarter (Q2) of 2017, underpinned by strong domestic demand and exports, and is projected to post higher growth in 2017. Favorable global prospects will

Figure 1: Malaysia's Benchmark Yield Curve—Local Currency Government Bonds

Source: Based on data from Bloomberg LP.

bolster external demand, translating into stronger exports. The Malaysian ringgit continued to gain strength against the US dollar, while the BNM deemed that liquidity remains sufficient in the banking system, backed by strong buffers.

Consumer price inflation in Malaysia continued its downtrend in July, falling to 3.2% year-on-year (y-o-y) from 3.6% y-o-y in June, 3.9% y-o-y in May, and 4.4% y-o-y in April. The moderation was connected to tepid global oil prices, which translated into lower transportation costs. While transport costs registered the fastest growth among all components of the Consumer Price Index in July, they also exhibited the fastest pace of moderation. Inflation in transport costs peaked at 23.0% y-o-y in March, declining to 7.7% y-o-y in July. Inflation for January–July averaged 4.0% and is expected to remain modest for the rest of the year. Core inflation, which excludes most volatile fresh food items and administered prices of goods and services, rose slightly to 2.6% y-o-y in July from 2.5% y-o-y in June. BNM noted that price pressures are expected to be contained despite robust domestic demand.

The Malaysian ringgit continued to advance against the US dollar, appreciating 4.4% year-to-date through 15 August. The ringgit's appreciation was supported by several factors, including the revival of foreign investors' buying interest in local bond and equity markets; a solid

external position backed by high international reserves and exports; efforts by the BNM to improve liquidity, trading activities, and infrastructure in the financial market; and strong economic growth prospects. In addition, low inflation in the US dampened expectations of a faster pace of Federal Reserve rate hike, leading to the broad weakness of the US dollar against most Asian currencies year-to-date through 15 August.

Malaysia's gross domestic product (GDP) growth sustained its upward momentum in Q2 2017, expanding 5.8% y-o-y, up from 5.6% y-o-y in the first quarter (Q1) 2017. It was the fastest growth rate recorded since Q1 2015. Domestic demand underpinned the strong growth, particularly private consumption expenditure, which grew 7.1% y-o-y in Q2 2017. Government expenditure, export, and import growth rates eased in Q2 2017 from Q1 2017. Growth in gross capital formation also moderated due to a contraction of public sector investment. On the production side, the services sector and the manufacturing sector expanded while the agriculture sector's growth slowed. On a quarter-on-quarter (q-o-q) and seasonally adjusted basis, GDP expanded 1.3% in Q2 2017. Malaysia's economy registered average annual growth of 5.7% in the first half of 2017.

Size and Composition

Total LCY bonds outstanding in Malaysia reached MYR1,246 billion (USD290 billion) at the end of June, an expansion of 3.3% q-o-q and 7.1% y-o-y (Table 1). Compared with the preceding quarter, growth was unchanged on a q-o-q basis but was faster on a y-o-y basis. *Sukuk* (Islamic bonds) continued to have a larger share in comparison with conventional bonds, amounting to MYR716.3 billion, or 57.5% of the total. The *sukuk* market expanded 4.0% q-o-q and 12.8% y-o-y in Q2 2017.

Government bonds. The size of the LCY government bond market continued to expand in Q2 2017, growing 2.9% q-o-q and 4.0% y-o-y. The growth rates were faster compared with those in the previous quarter. Central government bonds, which largely comprise Malaysian Government Securities (MGS) and Government Investment Issues (GII), continue to dominate the market with a total of MYR634 billion at the end of June on an increase of 3.5% q-o-q. Central bank bills outstanding continued to decline in Q2 2017, dropping 23.4% q-o-q, as securities matured and new issuance was low. Meanwhile, *Sukuk Perumahan Kerajaan* were unchanged at MYR28 billion at the end of June. Total government

3. Growth rates are calculated from local currency base and do not include currency effects.
4. *Sukuk Perumahan Kerajaan* are Islamic bonds issued by the Government of Malaysia to refinance funding for housing loans to government employees and to extend new housing loans.

Sources: Bank Negara Malaysia Fully Automated System for Issuing/Tendering (FAST) and Bloomberg LP.

sukuk reached MYR291 billion at the end of June and comprised 43.5% of the total government bond stock.

Issuance of LCY government bonds during Q2 2017 declined 21.5% q-o-q to MYR30.5 billion from MYR38.9 billion in Q1 2017. Lower issuance volumes were recorded across all components of government bonds in Q2 2017: MGS issuance fell 16.7% q-o-q, GII dropped 6.5% q-o-q, and Treasury bills declined 73.3% q-o-q. MGS and GII together accounted for 88.5% of total government bond issuance during the quarter. On an annual basis, securities issued by the government were up 8.0% in Q2 2017.

Auctions for government bonds were met with strong demand, although longer-dated government bonds, particularly 20-year maturities, garnered softer interest from investors, reflecting concern over monetary policies in the US and eurozone. Government bonds were supported by onshore money and a stable Malaysian ringgit.

Foreign holdings of LCY government bonds increased 9.2% q-o-q at the end of June, supported by growth in holdings across all components of the government bond market (**Figure 2**). Foreign holdings at the end of June were up 15.5% q-o-q for Treasury bills, 10.1% q-o-q for MGS, and 2.4% q-o-q for GII. During Q2 2017, net foreign bond inflows into Malaysia's LCY government bond market reached MYR14.4 billion, a turnaround from the

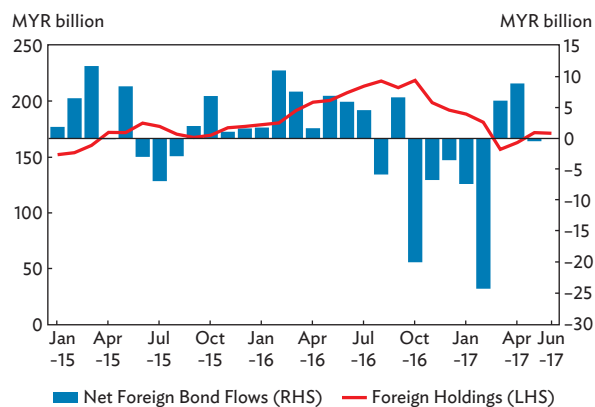

MYR35.0 billion of net outflows in Q1 2017. On a monthly basis, net inflows of MYR6.0 billion were recorded in April following 5 consecutive months of net outflows that were triggered by the uncertain policy direction in the US and the BNM's barring of offshore trading of the Malaysian ringgit. May saw increased net inflows of MYR8.8 billion, the bulk of which were in the form of foreign investor purchases of MGS. In June, however, net foreign outflows of MYR0.5 billion were observed in the LCY government bond market, mainly due to a decrease in foreign holdings of MGS. The reduction was attributed to the market's reaction to the US interest rate hike in June as well as due to profit-taking and the holiday-shortened trading month. The plan of the Federal Reserve to pare its balance sheet and possible monetary tightening among other major central banks could tighten global liquidity, resulting in a shift of investments to safe havens.

Corporate bonds. LCY corporate bond outstanding increased 3.8% q-o-q and 10.9% y-o-y in Q2 2017, registering a total of MYR576 billion at the end of June. The Q2 2017 expansion in the corporate segment was faster than that in the government bond market on both a q-o-q and y-o-y basis, as well as compared with the q-o-q and y-o-y expansions in Q1 2017. *Sukuk* totaled MYR425 billion at the end of June, comprising 73.7% of LCY corporate bonds outstanding.

Outstanding bonds from the top 30 corporate issuers amounted to MYR325.6 billion, or 56.5% of the total corporate debt stock, at the end of June (**Table 2**). The finance sector led the group with a combined amount of MYR153.2 billion from 12 firms, followed by the transport, storage, and communications sector with total outstanding bonds of MYR64 billion. Danainfra Nasional stayed on top of the list with MYR36.9 billion of bonds outstanding in Q2 2017, up MYR4.5 billion from Q1 2017.

Corporate bond issuance in Q2 2017 increased 6.8% q-o-q and 19.2% y-o-y to MYR40.6 billion. The q-o-q growth in Q2 2017 was slower compared with growth in Q1 2017, which was driven by a sharp rebound in issuance. Corporate issuance in Q2 2017 largely comprised commercial paper and medium-term notes amounting to MYR13.6 billion and MYR26.1 billion, respectively. The positive momentum in corporate bond issuance reflected an environment that is conducive to raising capital as interest rates remained favorable despite the Federal Reserve hinting at further tightening within the year. With ample liquidity in the market, firms

may continue raising funds, especially for infrastructure projects such as high-speed rail.

Danainfra Nasional dominated bond issuance in the corporate sector in Q2 2017, raising a total of MYR4,500 billion from a multitranche sale of 5-year through 30-year maturities (**Table 3**). Property firm Lembaga Pembiayaan Perumahan Sektor Awam raised MYR3,250 billion from a multitranche bond issuance and YTL Power International issued a 10-year bond worth MYR2,500 that fetched a coupon rate of 5.05%.

Investor Profile

The investor profile for LCY government bonds had several changes at the end of March compared with a year earlier (**Figure 3**). The share of foreign holders fell from 32.9% in March 2016 to 25.6% in March 2017, and no longer comprised the largest share in the market. The decline was due to the sell-off of government bond holdings by foreign investors, which began in the last quarter of 2016 and continued into Q1 2017, that was triggered by negative market sentiments due to uncertain policy directions in the US and was exacerbated by the BNM clamping down on offshore trading of the Malaysian ringgit in order to temper its volatility. The market share of foreign holders was surpassed by financial institutions

Figure 3: Local Currency Government Bonds Investor Profile

Note: "Others" include statutory bodies, nominees and trustee companies, and cooperatives and unclassified items.

Source: Bank Negara Malaysia.

and social security institutions during the review period, whose holdings accounted for 32.5% and 29.8% of the total LCY government bond market, respectively, at the end of March. The shares of insurance companies and other holders' share increased to 5.4% and 5.8% from 5.2% and 5.4%, respectively, while the BNM's holdings of government bonds climbed to 1.0% at the end of March from 0.4% a year earlier, which remained the smallest share among all LCY government bondholders.

In the LCY corporate bond market, life insurance companies had the largest share of holdings at the end of June (Figure 4). Life insurance companies increased their share of LCY corporate bonds outstanding to 40.0% from 38.5% a year earlier, while domestic commercial and Islamic banks experienced a marginal decrease to 38.9% from 39.0% during the review period. The Employees Provident Fund, foreign commercial and Islamic banks, and investment banks all saw decreases in their respective shares of LCY corporate bonds outstanding, while general insurance companies' share was steady at 2.3%.

Ratings Update

On 22 June, S&P Global affirmed Malaysia's foreign currency sovereign rating at A- for long-term and A-2 for short-term debt, and its local currency sovereign rating at A for long-term and A-1 for short-term debt.

S&P Global cited Malaysia's sound growth prospects, solid external position, and flexible monetary policy in its affirmation. S&P Global maintained a stable outlook for Malaysia's sovereign ratings but warned of the challenges involving alleged corruption in 1Malaysia Development Berhad, as well as the political risk linked to the upcoming election.

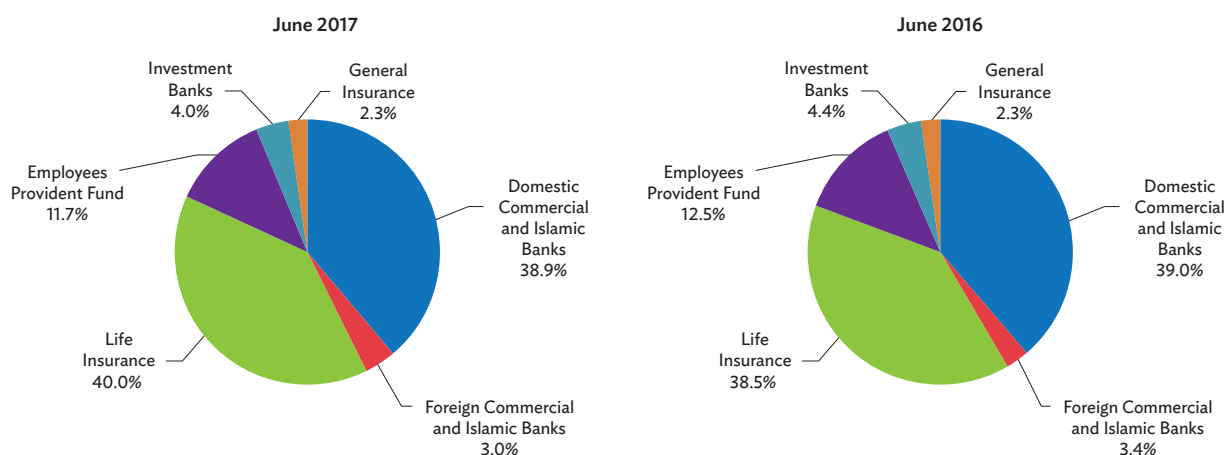

On 17 August, Fitch Ratings (Fitch) affirmed Malaysia's long-term foreign currency and LCY issuer default ratings at A-, with a stable outlook for both, on account of a resilient economic expansion despite lower oil prices and volatile capital flows, continued account surpluses, and a solid external position. However, the ratings agency cited lingering risks, which include sizeable contingent liabilities resulting from the 1Malaysia Development Berhad embezzlement charges that could worsen public finances, and rising political risk in the run-up to Malaysia's upcoming general election in mid-2018.

Policy, Institutional, and Regulatory Developments

Bank Negara Malaysia Removes Reserve Fund Requirement for Islamic Banks

BNM will no longer require Islamic banks to maintain reserve funds effective 3 May. In the past, Islamic banking institutions were required to set aside a percentage of

Figure 4: Local Currency Corporate Bonds Investor Profile

Note: The Employees Provident Fund's bond holdings data are as of end-December 2016. Sources: Bank Negara Malaysia and the Employees Provident Fund.

profits into a reserve fund prior to dividend distribution to serve as a buffer to be drawn upon during periods of stress. This prudential tool ensured banks could continue serving as financial intermediaries without disruption. According to the central bank, with the new policy in place, Islamic banks are only required to maintain minimum capital to operate and provide financial services effectively, and also remain to comply with the stringent capital requirements of the Basel III accord.

Bursa Malaysia Launches Leading Entrepreneur Accelerator Platform

Bursa Malaysia launched in July a platform for small and medium-sized enterprises (SMEs), the Leading Entrepreneur Accelerator Platform (LEAP), to serve as avenue to tap the capital market. SMEs can be listed on LEAP to provide them fund-raising through the capital market and at the same time comply with the regulations required of a firm preparing for a formal listing. LEAP is part of a system in which SMEs and start-ups can be listed on the equity crowdfunding platform, then on LEAP, and subsequently on the Ace Market and Main Market. Qualifying for listing on the platform does not require a track record of profits and operating history.

Philippines

Yield Movements

Between 1 June and 15 August, local currency (LCY) government bond yields in the Philippines rose for most tenors, particularly the 3-month, 6-month, 2-year, 5-year, 10-year, and 20-year maturities (**Figure 1**). The largest yield increase was seen for 6-month government bonds at 71 basis points (bps), while the smallest increase was 1 bp for the 2-year tenor. Yields fell for 1-year, 4-year, and 7-year government bonds, with 4-year maturities experiencing the largest drop of 14 bps. The yield for the 3-year tenor was practically unchanged. During the review period, the yield spread between the 2-year and 10-year maturities widened 7 bps from 132 bps to 139 bps.

The advance in yields for most tenors reflected the market's reaction to the United States (US) Federal Reserve's plan that it would soon start the process of balance sheet normalization, whereby it will reduce its holdings of US Treasury bonds and mortgage-backed securities, as well as on account of upbeat economic data reports. Softer US consumer price inflation, however, may have capped a further rise in yields as the Federal Reserve's decision on another rate hike, which greatly affects yield movements, may be delayed as prices are not accelerating as expected. The European Central Bank's statement on adjusting the parameters of its policy instruments may also have contributed to the rise in yields. On the domestic front, the Government of the Philippines incurred a budget deficit of PHP154.5 billion in the first half of 2017, 28.0% higher than in the same period a year earlier. Revenue projections from the tax reform package were reduced as some revenue-generating measures were watered down by the Philippine Congress. With more spending in the pipeline, the government may need to borrow more to fund the gap, likely pulling up government bond yields.

Consumer price inflation in the Philippines climbed to 2.8% year-on-year (y-o-y) in July from a revised 2.7% y-o-y in June. Nonfood inflation increased to 2.4% y-o-y in July from 1.9% y-o-y in June, lifted by higher prices in the transport sector due to upward adjustments in railway transport fare and domestic petrol prices. Higher prices were also observed for housing rentals, utilities, education, and miscellaneous services. On the

Figure 1: Philippines' Benchmark Yield Curve—Local Currency Government Bonds

Source: Based on data from Bloomberg LP.

other hand, price increases for food and nonalcoholic beverages slowed to 3.3% y-o-y in July from 3.5% y-o-y in the previous month. March and April posted the highest inflation rates of the year through July at 3.4% y-o-y in each month. Average inflation for the first 7 months of 2017 was 3.1%, well within the government's target range of 2.0%–4.0% for 2017. Core inflation, which excludes selected volatile food and energy items, decelerated to its slowest pace since January at 2.1% y-o-y in July.

The Bangko Sentral ng Pilipinas (BSP) maintained its overnight reverse repurchase rate at 3.00% and the interest rates on its overnight lending and deposit facilities at 3.50% and 2.50%, respectively, during its monetary policy meeting on 10 August. Despite inflation remaining relatively high in recent months, the BSP stated that inflation continues to be manageable. According to the central bank's latest baseline forecasts, average inflation will remain within the target range of 2.0%–4.0% in 2017. Inflationary pressures arising from the impact of the proposed tax reform program are expected to be lessened by social safety nets. The central bank's decision to keep the policy rate unchanged allows it to properly assess global developments, such as the normalization of US monetary policy, and to calibrate its policy tools accordingly.

The Philippine peso continued to underperform against the US dollar. On 15 August, the Philippine peso traded

at PHP51.41 to the US dollar, losing 3.5% since the start of the year. It reached an 11-year low in August, making it the worst performing currency in emerging East Asia in 2017. The Philippine peso is being weighed down by the current account deficit and negative sentiments over political concerns and the security situation in the southern Philippines. The BSP, however, dismissed worries surrounding the current account deficit as the central bank said that the deficit is underlain by capital goods imports that will eventually improve the economy's productive capacity. The central bank also said that the depreciation of the peso is consistent with government efforts to spur economic growth and it is prepared to use its foreign reserves to temper the volatility of the currency.

The Philippine economy expanded 6.5% y-o-y in the second quarter (Q2) of 2017 following a period of moderation in the preceding 2 quarters. The growth was much slower than the 7.1% y-o-y growth in Q2 2016, which was driven by election-related expenditures. On the expenditure side, GDP growth was helped by government spending, which accelerated to 7.1% y-o-y in Q2 2017 from only 0.1% y-o-y in the first quarter (Q1) of 2017. Household expenditure, export, and import growth rates in Q2 2017 were broadly at par with Q1 2017, while capital formation growth decelerated. On the production side, the primary sector registered faster growth of 6.3% y-o-y in Q2 2017, indicating continued recovery from El Niño. Industrial sector growth accelerated in Q2 2017, while services sector growth slowed even as it remained to be the main driver of growth. GDP

performance in Q2 2017 put the Philippines' growth momentum back on track. The economy is highly likely to reach the lower bound of the government's full-year GDP growth target of 6.5%–7.5%. The Philippines remains one of the best performing economies in emerging East Asia.

Size and Composition

The size of the Philippines' LCY bond market reached PHP5,168 billion (USD102 billion) at the end of June, up from PHP 4,943 billion at the end of March (**Table 1**). The bond market registered faster growth of 4.6% quarter-on-quarter (q-o-q) and 10.2% y-o-y in Q2 2017, compared with 1.5% q-o-q and 5.0% y-o-y in the preceding quarter. The market expansion was lifted by advances in both the LCY government and corporate bond segments.

Government bonds. Total LCY government bonds outstanding amounted to PHP4,211 billion at the end of June, posting growth of 5.0% q-o-q and 8.5% y-o-y. Strong growth rates were seen in Treasury bonds, which increased 5.1% q-o-q and 9.3% y-o-y, and in Treasury bills, which increased 11.1% q-o-q and 10.4% y-o-y. The expansion in the size of the government bond market was sustained by increased issuance, particularly the issuance of Retail Treasury Bonds (RTBs) in April. On the other hand, the outstanding bonds of government-owned or -controlled corporations continued to decline due to the maturing bonds and the absence of new issuance. As of the end of June, government bonds comprised 81.5% of the total LCY bond market.

Table 1: Size and Composition of the Local Currency Bond Market in the Philippines

	Outstanding Amount (billion)						Growth Rate (%)			
	Q2 2016		Q1 2017		Q2 2017		Q2 2016		Q2 2017	
	PHP	USD	PHP	USD	PHP	USD	q-o-q	y-o-y	q-o-q	y-o-y

() = negative, LCY = local currency, PHP = Philippine peso, q-o-q = quarter-on-quarter, Q1 = first quarter, Q2 = second quarter, USD = United States dollar, y-o-y = year-on-year.

Notes:

1. Calculated using data from national sources.
2. Bloomberg end-of-period LCY-USD rates are used.
3. Growth rates are calculated from an LCY base and do not include currency effects.
4. "Others" comprise bonds issued by government agencies, entities, and corporations for which repayment is guaranteed by the Government of the Philippines. This includes bonds issued by Power Sector Assets and Liabilities Management (PSALM) and the National Food Authority, among others.
5. Peso Global Bonds (PHP-denominated bonds payable in US dollars) are not included.

Sources: Bloomberg LP and Bureau of the Treasury.

Total government issuance of LCY bonds amounted to PHP415 billion in Q2 2017, up from PHP268 billion in the preceding quarter. The sharp increase of 55.0% q-o-q was mainly due to the issuance of PHP181 billion worth of RTBs in April. The RTB offer was met with strong demand, prompting the Bureau of the Treasury (BTr) to increase its initial offer size of PHP30 billion to accommodate investor appetite. The 3-year security has a coupon rate of 4.25%. Excluding RTBs, the issuance of Treasury bonds fell short of the PHP90 billion quarterly target as the BTr raised only PHP64.8 billion during Q2 2017 as opposed to reaching the target in Q1 2017. Most Treasury bond auctions were partially awarded due to high rates demanded by market participants amid pronouncements by major central banks of rate hikes. Moreover, the BTr is awash with cash from its RTB sale, allowing it to reject some bids.

In contrast, auctions of Treasury bills were successful, raising PHP89.2 billion of the PHP90 billion target in Q2 2017.¹⁸ Market participants preferred shorter-dated securities as they wait on the sidelines in anticipation of the Federal Reserve's balance sheet reduction and future rate hikes, as well as the direction of monetary policy of central banks in other advanced economies.

The Department of Finance is considering the possibility of issuing PHP30 billion worth of "patriotic bonds" for the rehabilitation of Marawi City in the southern Philippines. The department is considering a 20-year maturity for the bond issuance. However, bond traders think it is unlikely to attract buying interest from the market as investors prefer shorter-term bonds of about 3–8 years. On the other hand, an RTB-style issuance with a maturity of 5–7 years would likely garner sufficient interest. The BSP said that the market has enough liquidity to cover the issuance if pursued.

Corporate bonds. Total LCY corporate bonds outstanding grew 2.7% q-o-q and 18.5% y-o-y in Q2 2017 versus growth of 4.6% q-o-q and 14.6% y-o-y in Q1 2017. In annual terms, the growth rate of corporate bonds exceeded that of government bonds. On a quarterly basis, however, the corporate bond market lagged behind the government bond market's expansion. Corporate bonds outstanding rose to PHP957 billion in Q2 2017 from

PHP932 billion in Q1 2017, comprising 18.5% of the total LCY bond market at the end of June.

Outstanding corporate bonds in the property sector surpassed that of the banking sector in Q2 2017 with totals of PHP261.5 billion and PHP256.8 billion, respectively, at the end of June (**Figure 2**). The property sector's share of the total corporate bond stock increased to 27.3% at the end of June from 24.4% at the end of June 2016, and the banking sector's share decreased to 26.8% from 28.3% in the same period.

Aggregate LCY bonds outstanding for the top 30 corporate issuers reached PHP818.1 billion at the end of June, up 3.2% from PHP793.0 at the end of March (**Table 2**). While more banks were included among the top 30 issuers in Q2 2017 than in the previous quarter, property firms led the group in cumulative bonds outstanding. Property giants Ayala Land and SM Prime had the most bonds outstanding at PHP87.3 billion and PHP73.8 billion, respectively.

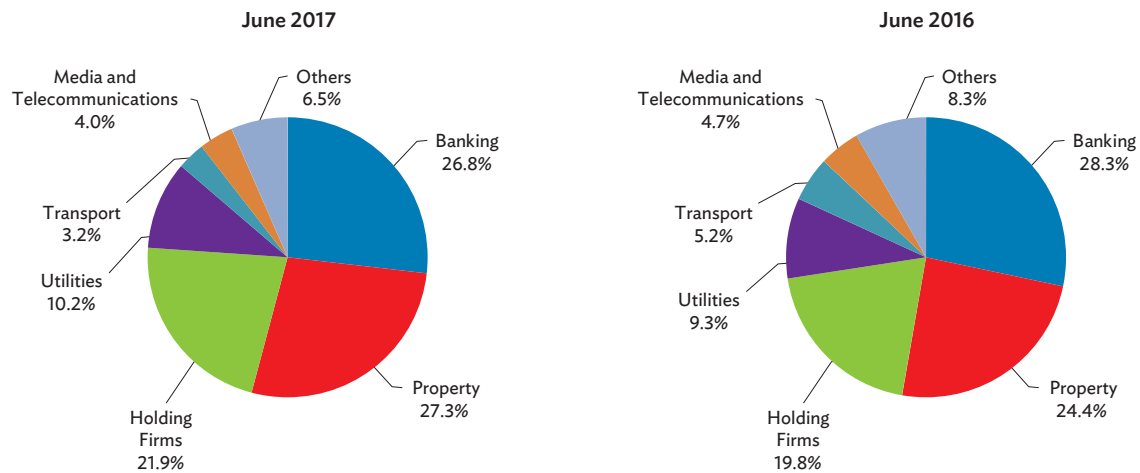

LCY bond issuance from the corporate sector increased 4.9% q-o-q to PHP54.9 billion in Q2 2017, in contrast to the 27.2% q-o-q drop in Q1 2017, which was mainly traced to high base effects. Companies are timing their entry into the market while rates are still favorable as the Federal Reserve monetary policy tightening could shift capital away from emerging markets and drive up funding costs.

Market participants see the corporate bond market remaining vibrant even if the government shifts its project financing to appropriation from public-private partnerships. Should government spending, particularly huge infrastructure projects, gain further traction, it would spur economic activity and provide more opportunities for firms to expand. Market participants see investor appetite remaining strong in the LCY corporate bond market due to ample liquidity and that the yield spread of corporate bonds over government bonds will continue to attract investors.

Bond issuance in Q2 2017 came from property firms, banks, and holding firms. Property firms led all other types of issuers during the quarter, with total issuance of PHP27 billion, followed by banks at PHP18 billion

¹⁸ This does not include special bills.

Figure 2: Local Currency Corporate Bonds Outstanding by Sector

Source: Based on data from Bloomberg LP.

and a single holding firm with PHP10 billion. Growth in property bonds outstanding is attributed to the optimistic outlook for the property sector, which is supported by low mortgage rates, strong dollar remittances from overseas Filipinos, and the expanding business process outsourcing industry.

SM Prime, the Philippines' largest property firm, had the largest issuance during the quarter, raising PHP20 billion from the sale of a 7-year bond carrying a coupon rate of 5.17% (Table 3). Another property firm, Ayala Land, sold a 5-year PHP10 billion bond with a 5.19% coupon rate.

Investor Profile

The profile of investors in the LCY government bond market in Q2 2017 was little changed from a year earlier (Figure 3). Banks and investment houses remained the largest holder of government bonds, with a share of 40.2% of the total market at the end of June, up from 36.4% at the end of June 2016. The group's nominal holdings were up 20.1% y-o-y. Contractual savings institutions and tax-exempt institutions comprised the second-largest share at 31.3% at the end of June on

an increase in nominal holdings of 10.4% y-o-y. The share of BTr-managed funds; brokers, custodians, and depositories; and government-owned or -controlled corporations and local government units decreased to 12.1%, 6.9%, and 0.5%, respectively, at the end of June from a year earlier, while other investor share increased to 8.8%.

Ratings Update

On 6 July, Japan Credit Rating Agency affirmed the Philippines' foreign currency and LCY long-term issuer ratings at BBB+ and maintained a stable outlook for both ratings. The rating agency stated that the affirmation reflected the economy's robust expansion, which is supported by strong domestic demand, a sound external position given by declining external debt and an accumulation of foreign exchange reserves, and a continued reduction of the government's debt burden. Challenges flagged by rating agency include improving the economy's infrastructure to enhance the investment environment in order to attract and sustain foreign direct investments, and restoring stability in the southern Philippines.

Table 2: Top 30 Issuers of Local Currency Corporate Bonds in the Philippines

Policy, Institutional, and Regulatory Developments

Bangko Sentral ng Pilipinas Considers Liberalizing Foreign Exchange Rules

In July, the BSP announced new reforms aimed at further liberalizing the foreign exchange market, including easing existing rules on foreign currency exchange to make it more attractive for the public to transact through formal platforms such as banks rather than in unregulated platforms like money changers and remittance agents. Current rules are seen by the BSP as restrictive, difficult, opaque, and shallow, resulting in higher costs of doing business and an expanding black market. The proposed liberalization would make the system more risk-based and transparent.

Department of Finance Outlines the Second Package of the Comprehensive Tax Reform Program

In May, the Department of Finance said it expects to submit the second package of the comprehensive tax reform program to the Philippine Congress by the fourth quarter of 2017. The second package will plug tax holiday loopholes granted by investment promotion agencies such as the Board of Investments and the Philippine Economic Zone Authority. The current tax perks allow companies to shift expenses from projects that are subject to tax holidays in order to maximize profits. The second package is revenue neutral wherein forgone revenue from lowering the corporate income tax rate to 25% from 30% will be offset by eliminating some tax incentives.

Singapore

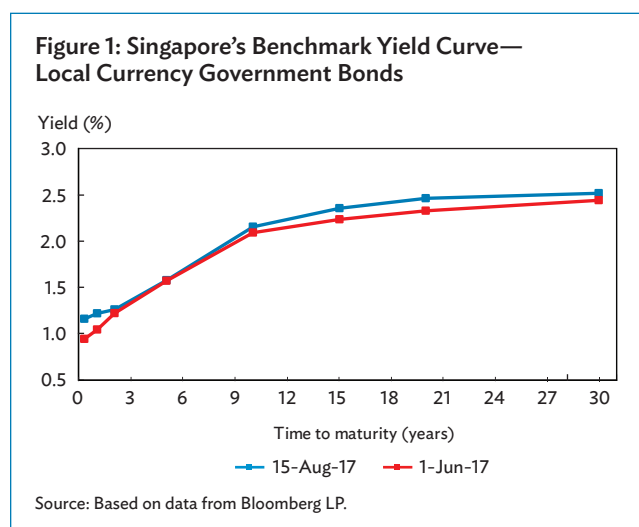

Singapore's local currency (LCY) government bond yields rose for all tenors between 1 June and 15 August. Singapore Government Securities (SGS) bills with tenors of 1 year and below rose an average of 19 basis points (bps), while bonds with maturities of 2 years to 5 years rose an average of 2 bps. Long-term SGS bonds with maturities of 10 years to 30 years rose an average of 10 bps. The 2-year and 10-year yield spread widened to 89 bps on 15 August from 87 bps on 1 June.

The rise in bond market yields in Singapore mostly followed the rise in United States (US) bond yields. As Singapore is considered a safe haven, the positive global growth outlook combined with the improved performance of Singapore's economy may have led to the uptick in bond yields.

Since its last meeting on 13 April, Monetary Authority of Singapore (MAS) maintained a neutral policy stance by keeping the rate of appreciation of the Singapore dollar nominal effective exchange rate policy band at zero, while also leaving the range of the policy band width and the level at which it is centered unchanged. This is deemed appropriate to provide continued support to Singapore's reviving economy. As of 15 August, the Singapore dollar had appreciated 5.8% year-to-date against the US dollar.

Singapore's gross domestic product (GDP) in the second quarter (Q2) of 2017 rose 2.9% year-on-year (y-o-y) after growing 2.5% y-o-y in the first quarter (Q1) of 2017. The strong performance of the manufacturing sector in the first half of 2017 provided a tailwind as evidenced by 8.1% y-o-y growth in Q2 2017 and a gain of 8.5% y-o-y in Q1 2017. The services-producing industries also added support, expanding 2.4% y-o-y in Q2 2017, up from 1.4% y-o-y growth in Q1 2017. With stronger-than-expected GDP growth in Q2 2017, Singapore's Ministry of Trade and Industry revised its 2017 GDP growth forecast upward to a range of 2%–3% from 1%–3%.

Singapore's domestic inflation remained modest in July, rising 0.6% y-o-y after increasing 0.5% y-o-y in June. The small increase in Singapore's inflation is more a result of rising energy-related and administrative costs rather than demand-driven price pressures. For the first 7 months of 2017, inflation averaged 0.7% y-o-y and is projected to

hover between 0.5% and 1.5% in full-year 2017, reversing the deflation of 0.5% recorded in 2016. MAS core inflation measure, which excludes private transportation and accommodation costs, is expected to average around 1%–2% compared with last year's core inflation of 0.9%.

Size and Composition

Singapore's LCY bonds outstanding rose to SGD347 billion (USD252 billion) at the end of June on an increase of 0.4% quarter-on-quarter (q-o-q) and 6.7% y-o-y (**Table 1**). The increase mainly came from a rise in the outstanding stock of LCY government bonds, particularly central bank bills.

Government bonds. In Q2 2017, the outstanding stock of LCY government bonds rose 0.8% q-o-q and 13.7% y-o-y to reach SGD207 billion at the end of June. The gains came from the increase in MAS bills, which rose 7.2% q-o-q and 30.2% y-o-y, while SGS bills and bonds shed 3.9% q-o-q but rose 2.7% y-o-y

A total of SGD7.4 billion was raised from SGS bills and bonds issued in Q2 2017, while SGD12.0 billion was redeemed, resulting in a net decrease of SGD4.6 billion at the end of Q2 2017. Meanwhile, new issuance of MAS bills rose 7.3% q-o-q and 38.6% y-o-y to SGD96.6 billion in Q2 2017, likely a result from the monetary operations of MAS to mop up excess liquidity.

Table 1: Size and Composition of the Local Currency Bond Market in Singapore

	Outstanding Amount (billion)						Growth Rate (%)			
	Q2 2016		Q1 2017		Q2 2017		Q2 2016		Q2 2017	
	SGD	USD	SGD	USD	SGD	USD	q-o-q	y-o-y	q-o-q	y-o-y

Corporate	143	106	140	100	140	102	2.0	6.5	(0.1)	(2.2)

(-) = negative, LCY = local currency, MAS = Monetary Authority of Singapore, q-o-q = quarter-on-quarter, Q1 = first quarter, Q2 = second quarter, SGD = Singapore dollar, SGS = Singapore Government Securities, USD = United States dollar, y-o-y = year-on-year.

Notes:

1. Government bonds are calculated using data from national sources. Corporate bonds are based on *AsianBondsOnline* estimates.
2. SGS bills and bonds do not include the special issue of Singapore Government Securities held by the Singapore Central Provident Fund.
3. Bloomberg LP end-of-period LCY-USD rates are used.
4. Growth rates are calculated from an LCY base and do not include currency effects.

Sources: Bloomberg LP, Monetary Authority of Singapore, and Singapore Government Securities.

Corporate bonds. Based on *AsianBondsOnline* estimates, total outstanding LCY corporate bonds declined 0.1% q-o-q and 2.2% y-o-y in Q2 2017 to fall to SGD140 billion at the end of June.

About half of Singapore's outstanding LCY corporate bonds originated from the 30 largest LCY corporate bond issuers, who had a combined LCY bond stock of SGD70.5 billion at the end of June (**Table 2**). Singapore's Housing and Development Board led the top 30 list again with total bonds outstanding worth SGD23.0 billion, followed by United Overseas Bank with SGD4.6 billion and Temasek Financial I with SGD3.6 billion.

Of the top 30 largest LCY corporate bond issuers in Singapore, six were state-owned agencies and half were listed companies. The corporate entities are made up of a diverse group with business stakes in the banking, consumer goods, diversified holdings, education, finance, marine services, real estate, transport, telecommunications, and utilities sectors.

In Q2 2017, an estimated amount of SGD4.7 billion worth of bonds was issued by 25 firms, led by the sale of a SGD700 billion perpetual bond priced at par to yield 3.95% by Mapletree Treasury Services and another SGD700 billion bond with an 8-year tenor and a 3.04% coupon rate sold by Singapore Airlines (**Table 3**). The amount of newly issued bonds in Q2 2017 reflected growth of 12.3% q-o-q and 2.3% y-o-y.

Policy, Institutional, and Regulatory Developments

Monetary Authority of Singapore Offers Grant to Encourage Rated Bond Issuance

On 30 June, MAS launched a Singapore dollar credit rating grant to promote the issuance of rated bonds in the LCY bond market. MAS noted that only about half of the current outstanding corporate SGD-denominated bonds are rated. The SGD400,000 grant per issuer will be available to qualified foreign and domestic issuers for a 5-year period and will be used to cover all expenses related to obtaining credit ratings from an international credit rating agency.

Monetary Authority of Singapore and Bank of Thailand Sign Agreement for FinTech Cooperation

On 11 July, MAS and the Bank of Thailand signed a FinTech Cooperation Agreement to develop deeper financial cooperation between the two economies. The agreement will enable the sharing of information on trends and regulatory experience, and the referral of FinTech companies to each side. Along with the agreement signing, the existing Memorandum of Understanding on banking supervision between the two parties was also updated.

Thailand

Yield Movements

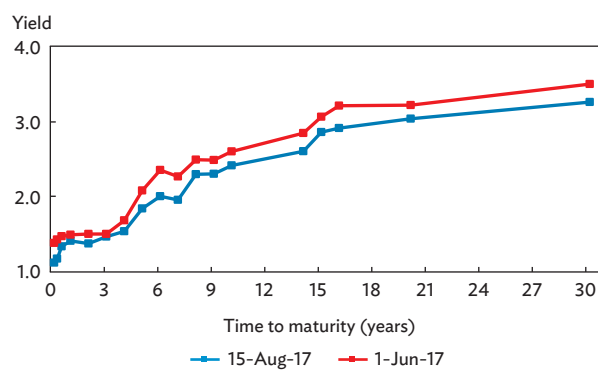

Yields for all tenors of Thailand's local currency (LCY) government bonds fell between 1 June and 15 August (**Figure 1**). Yields for securities with maturities of less than 1 year fell on average 22 basis points (bps), while yields for bonds with 1-year to 3-year maturities fell an average of 8 bps. For bonds with 4-year to 30-year tenors, yields fell an average of 23 bps. The yield spread between 2-year and 10-year bonds narrowed to 104 bps on 15 August from 110 bps on 1 June.

Low inflation this year has contributed to the overall decline in yields during the review period. Consumer price inflation eased to 0.4% year-on-year (y-o-y) in April, before turning negative in May and June. Subsequently in July, inflation inched up to 0.2% y-o-y. With inflation remaining below the Bank of Thailand's (BOT) target range of between 1.0%– 4.0% for 2017, the BOT has held its policy rate unchanged in January to August at 1.50%. The rate has stayed at this level since April 2015.

The strong appreciation of the Thai baht since the start of the year has helped attract foreign funds into the Thai bond market, further pushing yields down. At the end of June, the share of foreign holdings rose to 16.2% from 14.7% at the end of March. To limit speculation on the Thai baht, the BOT began tightening its issuance of short-term bills in April, particularly those with 3-month and 6-month maturities. In June, the BOT further relaxed its foreign exchange regulations, which allowed qualified Thai investors to directly invest a maximum of USD1 million per year in securities abroad, thereby lessening the upward pressure on the Thai baht.

Thailand's gross domestic product (GDP) accelerated in the second quarter (Q2) of 2017, rising 3.7% y-o-y after an expansion of 3.3% y-o-y in the first quarter (Q1) of 2017. GDP growth was supported by the strong performance in exports of goods and services, and the rise in domestic demand backed by continued growth in private and public consumption, and private investment. On the production side, the agricultural sector rebounded in Q2 2017. GDP growth for full-year 2017 is expected to come in at 3.5%–4.0%

Figure 1: Thailand's Benchmark Yield Curve—Local Currency Government Bonds

Sources: Based on data from Bloomberg LP and Thai Bond Market Association.

Size and Composition

Thailand's LCY bond market fell to a size of THB10,973 billion (USD323 billion) at the end of June from THB11,163 billion at the end of March, reflecting a decline of 1.7% quarter-on-quarter (q-o-q). On a y-o-y basis, Thailand's LCY bond market expanded 5.8% in Q2 2017 (**Table 1**).

Government bonds. The outstanding stock of LCY government bonds declined 3.4% q-o-q to THB7,964 billion at the end of June from THB8,249 billion at the end of March. Government bonds and Treasury bills, and central bank bonds led the decline, falling to THB4,103 billion and THB3,080 billion on contractions of 2.4% q-o-q and 6.1% q-o-q, respectively. State-owned enterprise and other bonds rose 1.9% q-o-q to reach THB781 billion at the end of June.

In an effort to rein in investor speculation on the Thai baht, the BOT in Q2 2017 decreased new issuance of its short-term bills. As a result, new issuance of central bank bills declined to THB1,199 billion, lower by 30.5% q-o-q and 32.5% y-o-y in Q2 2017. On the other hand, new issuance of central bank bonds totaled THB146.1 billion.

In the same period, the issuance of central government bonds and other government bonds increased by

15.2% q-o-q and 56.4% y-o-y, totaling THB483 billion. The combined total of newly issued bonds by the government amounted to THB1,828 billion in Q2 2017.

Corporate bonds. The outstanding stock of LCY corporate bonds in Thailand rose to THB3,009 billion at the end of June from THB2,914 billion at the end of March. Corporate debt issuance in Q2 2017 rose 23.2% q-o-q and 19.2% y-o-y, reaching THB453 billion from THB368 billion in Q1 2017.

At the end of June, Thailand's top 30 LCY corporate bond issuers continued to dominate the LCY corporate bond market with a combined outstanding bond stock of THB1,690.1 billion, or 56.2% of the total market (**Table 2**). Most of the top issuers are privately listed firms. Among the top issuers, five firms have outstanding LCY bond stocks exceeding THB100 billion: CP All (THB181.1 billion), Siam Cement (THB166.5 billion), PTT (THB134.8 billion), Berli Jucker (THB122.0 billion), and Bank of Ayudhya (THB109.9 billion).

Of the THB453 billion worth of newly issued LCY bonds in Q2 2017, the single largest issuance was the THB25 billion 4-year bond sold with a coupon rate of 3.25% by Siam Cement, the biggest private and listed cement and building materials company in Thailand. The next biggest was the 10.5-year THB17 billion bond with a coupon rate of 3.90% from Thailand's fifth-largest bank,

Bank of Ayudhya, which is also known as Krungsri. True Move H Universal was the third largest issuer in Q2 2017 with a multitranche bond issuance worth THB13 billion. Other notable corporate bond issuances in the LCY bond market in Q2 2017 are listed in **Table 3**.

Investor Profile

Insurance companies (29.2%) and contractual savings funds (25.2%) together continue to hold more than 50% of Thailand's LCY government bonds at the end of June (**Figure 2**). They were followed by commercial banks and foreign residents, whose shares increased to 15.4% and 16.2%, respectively, at the end of June from 15.1% and 14.5% a year earlier. These four groups cumulatively accounted for an 86.0% share of the total market, up from an 84.7% share at the end of June 2016.

In each of the first 7 months of 2017, Thailand recorded positive net foreign flows into its LCY bond market (**Figure 3**). A total of THB89.4 billion was recorded in Q1 2017, while Q2 2017 saw positive net inflows of THB66.2 billion. The positive net inflows into the LCY bond market in 2017 have been attributed to positive investor sentiment over Thailand's economy due to a sustained recovery supported by robust domestic demand, a strong export sector, and a high current account surplus.

Figure 3: Foreign Investor Net Trading of Local Currency Bonds in Thailand

Policy, Institutional, and Regulatory Developments

Bank of Thailand Reduces Issuance of Short-Term Bills

In April, the BOT decided to scale back the issuance of bills with 3-month and 6-month maturities by THB80 billion. The new measure was made to curb the rapid appreciation of the Thai baht.

Figure 2: Local Currency Government Bonds Investor Profile

Note: Government bonds exclude central bank bonds and state-owned enterprise bonds.
Sources: AsianBondsOnline and Bank of Thailand.

Bank of Thailand Eases Regulations on Foreign Exchange

On 5 June, the BOT relaxed its foreign exchange regulations to enhance the ease of doing business through a reduction in compliance costs. Starting in the fourth quarter of 2017, Thai investors with assets above THB50 million will be allowed to directly invest a maximum of USD1 million in securities abroad each year. The reform aims to give the private sector flexibility in conducting foreign exchange transactions and hedging based on internal risk management and control policies

within the framework set by BOT. The loosening of foreign exchange rules will (i) streamline the process, reduce required documents, and encourage the use of electronic forms; (ii) enhance flexibility in foreign exchange risk management; (iii) allow more alternatives in foreign exchange services, especially in retail cross-border transactions; and (iv) allow more investment options for investors and companies based in Thailand. Given the continued appreciation of the Thai baht, the BOT reform will not only improve the ease of doing business, but also address currency speculation by improving the process of capital outflows.

Viet Nam

Yield Movements

Between 1 June and 15 August, local currency (LCY) government bond yields in Viet Nam fell for all tenors, resulting in the entire yield curve shifting downward (**Figure 1**). Yields declined by an average of 40 basis points (bps) for the 1-year through 10-year tenors. Yield fell the most for the 15-year maturity, which shed 82 bps and led to the overall flattening of the yield curve. The spread between the 2-year and 10-year maturities narrowed to 131 bps on 15 August from 133 bps on 1 June.

The overall decline in yields was driven by a policy rate cut in July and relatively tame inflation during the review period. Consumer price inflation has been subdued in recent months on the back of softer food prices. The year-on-year (y-o-y) inflation rate eased to 4.3% in April and 3.2% in May, before it further declined to 2.5% in June and July.

Macroeconomic conditions have been stable, allowing the central bank to lower policy rates. On 10 July, the State Bank of Vietnam lowered by 25 bps the refinancing rate to 6.25% and the discount rate to 4.25%. The rate cut is expected to help spur economic growth. The government's 2017 gross domestic product (GDP) growth target is set at 6.7%.

Real GDP growth in Viet Nam climbed to 5.7% y-o-y in the first half of 2017 from 5.5% y-o-y in the same 6-month period a year earlier. However, economic growth

Figure 1: Viet Nam's Benchmark Yield Curve— Local Currency Government Bonds

Source: Based on data from Bloomberg LP.

for the first half of the year fell short of the government's full-year target. The agriculture, forestry, and fishery sector rebounded, expanding 2.7% y-o-y in the first half of 2017 after contracting 0.2% y-o-y in the same period a year earlier. Services-producing industries also expanded 6.9% y-o-y during the first 6 months of the year.

Size and Composition

Viet Nam's LCY bond market expanded in the second quarter (Q2) of 2017 to reach a size of VND1,019.6 trillion (USD45 billion) at the end of June (**Table 1**). Overall growth accelerated to 1.9% quarter-on-quarter (q-o-q) in Q2 2017 from a marginal gain of 0.3% q-o-q in the first

quarter (Q1) of 2017. On a y-o-y basis, however, growth moderated to 5.0% in Q2 2017 from 14.2% in Q1 2017. Growth stemmed mainly from increases in the stock of government bonds, particularly Treasury instruments issued by the State Treasury. Viet Nam's LCY bond market remained the smallest in emerging East Asia.

Government bonds. The outstanding size of the LCY government bond market climbed to VND974.8 trillion at the end of June on modest growth of 2.3% q-o-q and 4.5% y-o-y. Growth was solely accounted for by Treasury bonds, which gained 4.4% q-o-q and 8.6% y-o-y in Q2 2017. At the end of June, all short-dated instruments—Treasury bills and State Bank of Vietnam bills—have matured. There was no new issuance of Treasury bills and State Bank of Vietnam bills during the quarter. The government has focused its issuance plan on medium- and longer-dated tenors—particularly bonds with maturities of 5 years and above—to extend its maturity profile and spread out debt repayments. The stock of state-owned enterprise bonds also declined as redemption exceeded new issuance.

In Q2 2017, new issues of government bonds contracted on both a q-o-q and y-o-y basis. The bulk of new issuance (96.7%) was accounted for by new Treasury bond issues. However, the issuance of Treasury bonds during the quarter fell short of a planned target of VND65 trillion. In the third quarter of 2017, the government expects to raise VND45 trillion from the sale of Treasury bonds with maturities of between 5 years and 30 years.

Corporate bonds. The outstanding size of the LCY corporate bond market contracted to VND44.8 trillion at the end of June on a 7.0% q-o-q decline. On a y-o-y basis, growth moderated to 15.5% in Q2 2017 from 30.9% in Q1 2017. At the end of June, the entire corporate bond segment of Viet Nam comprised 27 firms (**Table 2**). (*AsianBondsOnline* classifies some state-owned entities as part of the government bond segment.)

Masan Consumer Holdings remained the largest corporate bond issuer in Viet Nam at the end of June. Its outstanding bonds valued at VND11.1 trillion accounted for 24.8% of the total corporate bond stock. In the second

spot was Vingroup JSC, a real estate firm with outstanding bonds amounting to VND7.0 trillion. The third-largest corporate bond issuer was Asia Commercial Joint Stock with outstanding bonds of VND4.6 trillion.

Ratings Update

On 18 May, Fitch Ratings (Fitch) affirmed Viet Nam's long-term foreign currency and LCY issuer default ratings at BB-. Fitch also revised the outlook on both ratings to positive from stable. Fitch cited Viet Nam's strong growth performance and prospects, current account surpluses, manageable debt service costs, and sustained foreign direct investment inflows as the drivers behind the rating affirmation. The revision to the outlook was underpinned by Viet Nam's policy initiatives geared toward maintaining macroeconomic stability.

Policy, Institutional, and Regulatory Developments

State Treasury to Issue VND45 Trillion of Government Bonds in the Third Quarter of 2017

In July, the State Treasury announced its bond issuance plan for the third quarter of 2017 valued at VND45 trillion. Of this amount, VND18 trillion is expected to be raised from the issuance of 5-year bonds and VND3 trillion from 7-year bonds. Bond sales amounting to VND6 trillion each are targeted from the issuance of 10-, 15-, 20-, and 30-year bonds.

Viet Nam Launches Derivatives Market

In August, a derivatives market was officially launched in Viet Nam, marking an important milestone in the development of its securities market. Three types of derivatives instruments will be offered: (i) futures contract for the VN30 Index, (ii) futures contract for the HNX30 Index, and (iii) futures contract for 5-year government bonds. The futures contract for the VN30 Index was the first derivatives product to be launched.

Table 2: Corporate Issuers of Local Currency Corporate Bonds in Viet Nam

Issuers	Outstanding Amount		State-Owned	Listed Company	Type of Industry
	LCY Bonds (VND billion)	LCY Bonds (USD billion)			
1. Masan Consumer Holdings	11,100	0.49	No	No	Diversified Operations
